Choose a Particle Size Analyzer will be given in a later Particle Sciences Technical Brief. Currently, the most widely used technique for PSD determination is that of laser light scattering. There are two variations: dynamic light scattering (DLS)³ and Fraunhofer diffraction (FD)⁴. The choice is dictated by the size range under investigation.

1.1 This method covers the quantitative determination of the distribution of particle sizes in soils. The distribution of particle sizes larger than 75 μ m (No. 200) is determined by sieving, while the distribution of particle sizes smaller than 75 μ m is determined by a sedimentation process, using a hydrometer to secure the necessary data.
