The solution above assumes that the state is known when action is to be taken; otherwise () cannot be calculated. When this assumption is not true, the problem is called a partially observable Markov decision process or POMDP.

Markov decision process - Wikipedia

In mathematics, computer science and operations research, mathematical optimization or mathematical programming, alternatively spelled optimisation, is the selection of a best element (with regard to some criterion) from some set of available alternatives.. In the simplest case, an optimization problem consists of maximizing or minimizing a real function by systematically choosing input values ...
