Threads use and exist within these process resources, yet are able to be scheduled by the operating system and run as independent entities largely because they duplicate only the bare essential resources that enable them to exist as executable code.

POSIX Threads Programming - High Performance Computing

When to Use PFX. The primary use case for PFX is parallel programming: leveraging multicore processors to speed up computationally intensive code.. A challenge in leveraging multicores is Amdahl's law, which states that the maximum performance improvement from parallelization is governed by the portion of the code that must execute sequentially.
